

## Reversed Plans for Residential Applications October 15, 2010

### **Background:**

Submitted residential plans and all accompanying roof & floor layouts are to be an accurate representation of the finished dwelling. By having all documents oriented properly at the time of permit application, consistency can be maintained for structural component designers, builders, and on-site inspections.

### **Effective Immediately:**

All permit application documents must be oriented correctly to represent the finished dwelling, including site plan, floor & truss layouts and home plans.

**Building Inspection Services** ensures compliance with the Safety Codes Act and all related Building Codes, Standards and applicable By-laws. We work to safeguard the health and safety of Lethbridge residents through Building, Mechanical, Plumbing and Electrical permits and field inspections.
