

## Acceptable Completion of Infrastructure

### Construction Completion Certificate (CCC)

1. After construction, a mutual inspection including the developer's representative and the City of Lethbridge is conducted to ensure that the infrastructure is substantially complete.
2. A submission is made to the City for each utility, which includes all of the information found on the CCC checklist.

When all supporting documents are received and all deficiencies are addressed then the CCC is approved and the maintenance period for the utility begins.
